

Your **Skype** name is the **username** you created when you first joined **Skype**, other than your email address or phone number. If you sign in with an email address or phone number instead, then you have a Microsoft account, not a **Skype** Name.

To find your Skype ID on Windows, simply select your profile picture, and your Skype name will be displayed in your profile. For users that sign in with their Microsoft Account, they will not be able to find their Skype ID there, but the email address of their Microsoft Account instead.

**On your Iphone:**

—Click your profile icon at **the** bottom left of **the Skype** for Windows 10 window. —  
Your **Skype** name is displayed **in** your profile. —Tap **the My** Info tab and you will see your **Skype** name displayed beneath your full name **in** lowercase letters. —Click your profile picture **in the** top left of **the** screen.
